

Andrew Tomaka

SOFTWARE ENGINEER

East Lansing, MI 48823

734-732-5086 | atomaka@atomaka.com | www.atomaka.com | atomaka | atomaka

Summary

Full-stack software engineer specializing in back-end software and cloud infrastructure development. Passionate about maintainability, I enjoy writing well-tested code that can be built and deployed in repeatable ways on collaborative teams with high output and low (manual) process. I ♥ Ruby, but can also leverage my breadth of experience when useful for organizations.

Work Experience

OAK Network

SOFTWARE ENGINEER

Remote

May. 2022 - Sep. 2022

- Reduced annual infrastructure costs by over \$200,000 leveraging lower cost, bare metal servers where it made sense.
- Maintained blockchain servers using Terraform and Ansible.
- Unified developer deployment experience with Github Actions to generate repeatable artifacts, reducing hands-on time during deployments.
- Developed blockchain code in Rust.

benefitbay™

SENIOR LEAD SOFTWARE ENGINEER

Remote

Jul. 2021 - Apr. 2022

- Planned, led, and assisted in development efforts bringing a legacy application running Ruby 2.3 and Rails 3.1 up to Ruby 2.7 and Rails 7.0.
- Maintained AWS infrastructure as code using Terraform to provide delivery of web application as a Docker container.

BOLD PENGUIN

LEAD SOFTWARE ENGINEER, SENIOR SOFTWARE ENGINEER

Remote

Jul. 2019 - Oct. 2020

- Maintained and developed new features for multiple large applications written in Ruby on Rails with AngularJS front-ends.
- Coordinated cross-team features to support enterprise customers.
- Facilitated developer experience by working on an extra-curricular team providing a Golang CLI tool to assist in day-to-day operations.

Michigan State University

INFORMATION TECHNOLOGIST III, II, I

East Lansing, Michigan

May. 2012 - Jun. 2019

- Mentored cross team developers in better software development practices including version control, automated testing, and CI/CD usage.
- Deployed Ruby and Javascript APIs to AWS using Cloudformation, Terraform, and custom tooling.
- Developed and maintained multiple greenfield Ruby on Rails API applications with RESTful and GraphQL interfaces.
- Maintained code written in C, Bash, Javascript, Perl, PHP, Python and other languages.
- Administered Linux and Unix servers hosting services including LPRNG, MySQL, Kerberos, Shibboleth, and Apache.

DriveOnGroup

TECHNICAL DIRECTOR, SOFTWARE ENGINEER

Lansing, Michigan

Jan. 2016 - Jul. 2017

- Coordinated local and offshore development talent building native mobile web applications backed by APIs.
- Isolated and corrected performance issues preventing API from delivering necessary information to mobile front-ends.
- Migrated API service from a single node with no redundancy to an auto-scaling AWS Elastic Beanstalk deployment.
- Developed Ruby on Rails API for scheduling and pairing drivers with riders.

p5dev, LLC

SOFTWARE CONSULTANT

Remote

Nov. 2006 - Feb. 2013

- Worked directly with small business owners to explore custom software solutions that fit their needs.
- Built web applications using Perl, PHP, CSS, and Javascript.
- Maintained custom Linux and Windows servers used for hosting web applications.
- Administered Apache and MySQL applications to support custom written software.
- Integrated with modern and legacy software including LDAP, AS/400, and DB2.
